

# Macmillan Cancer Care Information Centre

Blythe House Hospice was so impressed with the new Macmillan Cancer Care drop in centre, that Building Projects (UK) were invited back to work on a further extension project.

**Location:** Chapel-en-le-Frith  
**Project:** Blythe House Drop In Centre  
**Duration:** 30 weeks

“I have no hesitation in recommending Building Projects to prospective clients; we are extremely impressed with the professional manner in which the Macmillan project was undertaken.” **Alan Cawthorn, Finance & Project Manager, Blythe House.**

## Challenge

Blythe House Hospice offers free, individualised, holistic care and support for anyone in the High Peak living with cancer or other serious, life threatening illness. Building Projects (UK) was commissioned by Macmillan Cancer Relief to build a drop in centre at the hospice. The challenge was to undertake a major construction project, converting an existing smoking shelter and store room into a modern, welcoming extension without disturbing patients and staff at the hospice.

## Solution

Building Projects (UK) used their expertise in operating in a live high care environment. Works completed included:

- Construction of extension
- Walls and ceilings
- Electrical modifications
- Heating installation

- Fitted furniture
- Ash internal doors
- Aluminium external automated sliding doors with integral blinds
- Engineered oak flooring and carpet tiles fitted
- Decoration
- External landscaping

## Benefits

The project was completed to schedule, within budget and to the client's absolute satisfaction. Blythe House now has a Macmillan Cancer Care Information Centre providing a unique drop-in service for anyone affected by cancer in the area, with access to high quality information and empathic support. Blythe House were so impressed with the standards and execution of the project that they invited Building Projects (UK) back to work on a further extension project.
