

# Thornbrook Surgery

Thornbrook Surgery were so impressed with the standard and execution of Building Projects (UK) work, they were brought in for further projects.

**Location:** Chapel-en-le-Frith

**Project:** Re-modelling and extension works Phase I and Phase II

**Duration:** 18 weeks

“The building work could have been a nightmare for us, instead of which, it was a pleasure. Building Projects (UK) have a professional attitude and the new rooms are fantastic.” **Julia Ralphs and the Thornbrook team**

## Challenge

Thornbrook Surgery is a purpose built surgery opened in 1992. With a growing patient list and the need to offer more services in the community, they wanted more consulting rooms, more office space and a newly invigorated reception area that was more in keeping with a 21st century practice and training centre. The challenge for Building Projects (UK), who was contracted with the work, was to undertake the project without disrupting normal surgery hours, patients or staff.

## Solution

Building Projects (UK) created five new consulting rooms and refurbished the reception area and created new office space in a loft conversion. Building works completed included:

- All associated drainage
- New electrical layout
- Marmoleum flooring
- Partitioning, ceilings and decoration
- New reception area designed
- Bespoke reception desk finished in maple and aluminium

- Loft space built including structural steelwork for strengthening

## Benefits

Thornbrook Surgery was delighted with the whole project. Completed in 18 weeks, the major transformation was achieved without a minute lost in surgery time. Building Projects (UK) undertook major building works out of hours and at weekends to ensure the surgery could remain fully operational. Temporary partitions and entrances were installed to enable work to continue during surgery hours.

The surgery has been able to expand its services in the community with a further six consulting rooms and now boasts a large and bright reception/waiting area and an enviable open plan office space. The surgery has been able to bring more services to the area and their patients no longer have to travel long distances. The state of the art facility is now also used as a training practice, helping to educate and provide doctors and nurses for the future.
