

O2-UK

With meticulous precision and speed Building Projects (UK) delivered Maintenance and Fire Protection to nationwide O2-UK sites.

Location: Nationwide

Project: Upgrade of Networking Data & Switch Rooms

Duration: 12 Months

“As we were upgrading the network, speed was the priority. This meant we needed the works done quickly, efficiently and to a high standard so customers could regain full service again. Building Projects worked flat out to ensure that the service could be resumed as quickly as possible”

G. Marsden – Project Manager – TTL O2 UK

Challenge

Building Projects (UK) were part of a contracting team which were challenged to fit out and upgrade fire protection to data and switch rooms for O2-UK in line with their network upgrading to 3G.

Solution

Building Projects (UK) worked long hours, whilst maintaining strict Health & Safety Standards this ensured network service was regained quickly. Our works included:

- Forming of Structural openings and Core Drilling
- 4 Hour Rated Partitioning
- Raised Access Flooring
- Anti-Static Flooring
- Suspended Ceilings

- Fire Protection
- 4 Hour Rated Fire Door sets
- Decoration
- Sealant Works

Benefits

O2-UK benefited by minimal down time to their network meaning customers weren't disconnected for lengthy periods of time. The new data rooms at O2-UK now are fully compliant with fire regulations.

Overall O2-UK were extremely pleased with the team at Building Projects (UK) as they managed to complete the work quickly whilst operatives were disconnecting the network.
